Abstract

The technology is omnipresent and indispensable at present era. Due to the technology, the education of teaching English is undergone an enormous transformation. The recent technology signifies the major development in the English language teaching and learning methods. The English teachers are very energetically integrating the technological teaching materials planned to make possible and through this, it helps the most advantageous in teaching delivery. According to the language teaching, the digital virtual media is occupied the classroom. At present era, the teaching is too interesting because of the digital media. The language teachers are creating a visualized of innovative in approach. “Technology in Education” is being an important role in educational field. The students need for technology in the education system. The conventional methods are based on lecturing but the present learning is foundation on interactive learning method. The modern technologies like Internet, Skype, Interactive Boards, Blogs, Android phones, Twitter, YouTube are used for the learner’s interactive session in the classroom. The research paper attempts to establish the use of technology in language teaching and it brings new teaching technique and to make sure the effective and quality based teaching.

Keywords: Digital Tools, English Teaching, Interactive Activity, Interactive Boards, Internet and Pedagogy.

The traditional method of teaching the English as a foreign language in India, the teachers are utilized the multi sources in the classroom. So the students are only the receivers in the traditional method of teaching. There the teachers are the center of the role, when students are the quiet objects. It’s altered at present scenario. At current era, the learners are being the core of the learning process. The teachers are playing the vital role in the classroom like director, manager, mentor and counselor with all their efforts. The teachers can use a model in the language teaching, and facilitate learning also happens inside the classroom, which is extended into the outside learning circumstances. The usage of digital technology in language instruction is widely understands to includes an innovative function of methods, devices, materials, systems and tools, which considers as the strategies that are directly appropriate to English language teaching. It can be direct to achieve the preferred goals of teaching. Digital technology is accepted as a significant educational supporting tool of teaching and learning contexts, and it brings some the opportunities to improve the substance and delivery of the pedagogies which, associates with traditional English instruction.

Digital teaching reaches through allowing the student as well as teacher to re-examine the difficult content until it's clearly understood. The usage of modern technology is unlimited to the use of digital devices and machines, but it gets to the creative methods and systems of education. It helps to make easy, faster and learning development. According to educational theories, the technology learners are acquired their English language knowledge as well as the skills. Digital technology is used in English language teaching and consolidate the included the view of modern system. Through this the students can achieve the necessary results.

The fashionable technology is indispensable, particularly in the wake of unprecedented growths across various disciplines and fields. The education sector is rapidly increased by the worldwide technological revolt through current technological like multi-media devices, computerization, effects applications, mobile phones, social media, and audio/visual. It optimizes the language instruction and it helps to give the teachers to bond with activity classroom learners in an advanced level of systematic method. The Internet brings direct responses to access the applications, software with the additional platforms and materials. It helps to expedite the language teaching and learning. This affordance is widely available to modern world. Teachers are the vital role-play in operating system and the different applications and teaching methods in digital teaching. Most of the programs are designed to support the efficient language and it helps to increase the learner's understandable and achievement of language skills.

A learning system based electronic resources is known as e-learning. It's based on the inside or outside of the classrooms with the help of computers. It's called as an e-learning. E-learning is a network-enabled transfer system, which delivers the skills and knowledge to the learners. This kind of education makes to a huge number of receivers at a time. In the beginning, it's not approved and later, this type of teaching methodology can be used in learning. The progress and advancement of technology in learning system is embraced by many learners. The workstations are the main thing in the field of education. The android devices are played a vital role in the learning classrooms. Books are replaced by electronic learning materials like CDs and optical discs. So the knowledge also shared through the internet. So it make easy to accessible 24/7, anywhere at any time.

E-learning is a digital technology era and it helps in professional lives. It's widely used to collect the information and do the research various subjects for educational needs. The Internet is a major connector for effective teaching and learning purpose. Teachers are using the digital teaching tools through the posting of their teaching materials in the school website. The learning process makes more interesting thing which diverse the use of tutorial sources. Through this the teaching trainees can teach the usage of PPT slides, graphic works to seek the students' attention. For example, YouTube videos are practiced in the English classroom teaching for different aspects to improve the language meanings, pronunciation, and tone. The advantage of YouTube is to teach the English in day today life. The teacher uses the digital tools for improving the learners' LSRW skills.

The Skype provides unlimited possibilities for teachers as well as students to contact anyplace. It gives the chances for the learners to learn the English language and easily connected with countries for language skills. Due to this, the teachers can mentor the students and also give a home work to the language beginners. The learners can access easily to read, to present, or to perform conveniently and mingled with other students on writing projects. Twitter, is a social application, which helps to develop learners' foreign language to the extreme level. Twitter creates the impact on students' engaging process in learning with the help of online education digital tool. For learner's development, the teacher can make use of a variety of activities through online education device to connect the learners in activities. Smart-boards and whiteboards interactive are good replacements for traditional whiteboards as they provide, which presents through the computer's screen.

The SMART boards can help the teachers to teach the language easily and it helps to improvise the English language teaching. SMART Boards are used to play the videos, and audios to teach students with interactively. The mobile phones also used for learning process, which has multi applications. It helps to conduct the online classes and easily carryout to manage at anywhere. Podcast is a sequence of digital media documents and it distributes the materials easily and it's easy to access in the classroom. The learners are listening to news clippings, audio files, and video clippings through Web. The teacher can connect with learners through podcasts and also assign the news channels.

Blogging becomes as popular in the field of education and it's an easy to share the details and materials. Instead of use the textbooks, many instructors can choose the innovative digital techniques to teach the learners and get the knowledge in different types of media. Teachers are creates a way blog. Educators can use the free platform like Word press and Blog Spot. At present era, blogs displays the photos, audio files and videos. Through the access of blog the teacher can encourage the students to learn the language. The teachers should answer to students' posts in quickly. Assign the writing works related to the content and ask questions regarding the content. Blog writing requires in digital classroom teaching and it uses for the class assessment test. Students can post their writing homework on time.

Dayton and Kemp, says, the usage of media in language lessons, which gives benefit in the following ways like digital teaching can provides the learning materials to learners. Teachers vary in understanding a concept. Through the social media, interpretations are reduced, and the information is communicated commonly. Media helps to convey audio information and video, which helps to more concrete and complete assessment work. It provides interactive and innovative learning process and easy to communicate with students. It helps to reduced teaching and learning time allotment so it consumes the minimum period of learning process, which makes free to learn. The classes are recorded and it saves the teaching video and access unlimited at anytime. It helps to the students to do their exercises and varied learning tasks.

Digital teaching helps to improve the student learning skills. Through the access of media the learning process is more efficient. It's called as a media "talk". Media is enabling at anytime from anywhere. The students can access without others help and use for self-learning. It brings an optimized constructive approach towards in learning method. Digital media is too interesting to learning and teaching process, which enhances the students' skill. It plays a teacher's role. With the help of media, teachers don't repeat the details. It helps to save the time through the verbal details.

The digital world is connected with the world of the education field. Technology helps to present the new way of learning opportunities, and ideas to educators. It adapts to our new ideas and knowledge landscape with approaches. The digital applications and platforms are becoming more essential part of lives. Digital learning is increased at present era in education field of students' life. It achieves a great thing at current and future world. In digital era, the Google Classroom is a free and accessible web source, which designs to the schools and colleges to assist for drafting, mass distribution, and grading assignments in online. Google Classroom learning process becomes easy to share the files and documents to students and get their response for the assessment works. The students also send their questions from their lessons. It makes easy to get the answers from teachers as well as response from the learners. Teachers used to upload the learning resources and source documents for students. Through Google Classroom, teachers assign the assignments, seminars, Google documents, Google forms PPT slides for student's assessment work.

Online learning is possible at the modern era. The learners are included to unable to attend the traditional classes. Ant if they couldn't find a specific class at their chosen institution they can learn through online mode of teaching method. The rural place learner and working people are mostly

prefer to learn independently through online classes. The minimum requirement of an online course is to access the internet, the computer in the online classroom. Online courses are provided an excellent way of teaching method, courses delivery, and it permits to access the lessons at anytime. Students can get the web resources with their comfortable zone in their busy schedules.

Online learning plays a vital role in education field. It refers as “e-learning”. Online learning is known as “distance learning”. It avails the several types of teaching and learning methods. The Correspondence Courses also conducted through mail, which makes the classroom interaction to learners. The Tele-courses are easy to deliver the content through radio or television broadcast. Online Learning like Internet-based courses is offered and easy to access in everywhere. Mobile Learning also plays a vital role in education field which uses the device like as mobile phones, and sound players for language teaching.

The aim of this research article presents the technological advancements in different fields of study, which has existed in the language learning classrooms. The teachers are welcome the digital technological growth can works as a communicative tool to sustain their education. This kind of education creates impact on education field among the people. The learners are very excited to study in digital kind of teaching environment. Instruction is changed from teacher-centric to student-centric. The most important aims of use the modern digitals can easily connect with the students in education field and stimulate the learners to obtain English skills.

The digital technology helps to gain the learning context and it’s easy to get the subject materials by the using of digital technology. It helps to motivate and direct the students to communicate with each other. In future, multimedia can be leads a vital role in education field and it’s an important tool to connect the students in learning English. Through this, the value of online education and online applications are used by the students in new digital educational field. It can be a benefit method in teaching field, which brings from the extensive survey of English skills. It helps to improve the language communication in skill. The present teaching-learning method needs the modern digital technology for education field.
