## Abstract

*This paper presentation explores and highlights the prevalence of technology in our daily lives discusses how these innovations impact our daily life positively explains what personal freedom means in this context and also examines how innovation and personal freedom clash which provide real-world examples of challenges and conflicts. Highlight that it's important to figure out how we can use the exciting new technology while still keeping our freedom and rights. This paper explains why it's important to follow these ethical rules and why it's a necessity in our life*

**Keywords:** Innovation, Personal Freedom, Digital Ethics, Internet, Technologies, Conflict

## Introduction

In today's world the word "Digital" plays a consistent role, digital is something that is a development of our life and modernity. The word *DIGITAL* has seven letters but it has the whole world in it. Digital which signifies Technology, the internet, modern ways of development, and resources where we get all information and resources in a single click of a keyboard. This digital evolves with some ethics which leads "*Digital Ethics For Changing World*". Changing is a renovation where people always need a change, which they mean only in a positive way. When we compare a person or say about particular individuality his positive thoughts and attitude speak more. But a person with negative attitudes and thoughts can become very popular more than the positive ones. This is the power of negativity, where people engage and are involved in negative activity. The greatest example was given by Dr. A.P.J. Abdul Kalam.

## **Dr.A.P.J Abdul Kalam Letter to Every Indian**

*(Why Is The Media Here So Negative)*

Why are we in India so embarrassed to recognize our strengths, and our achievements?

We are such a great nation.

We have so many amazing success stories but we refuse to acknowledge them Why?

They are the first in milk production

They are number one in remote sensing satellites.

The other second largest producer of wheat

We are the second largest producer of rice

Look at Doctor Sudharshan he has transferred the tribal village into a self-sustaining, self-driving unit.

There are millions of such achievements but our media only observed the bad news failures and disasters.

Dr.A.P.J .Abdul Kalam apprise about the negatives of Digital media.

In a changing world, some negative ethics are followed by few people, whereas those people see only the negative side of technology.

### **Balancing Innovation and Personal Freedom**

Technology is like “Tech” or “knowledge” where human gains knowledge technically Though it might be the knowledge of another man.

It provides resources to all humans through computers and the internet. Balancing our life is necessary similarly balancing the innovation of technology is mandatory. Development doesn't exist only from freedom of industrial development and the modernity of human development is something which we develop ourselves technically with with correct ethics. But few fail to balance the technology and misuse digital ethics in the wrong way. Ethics is needed where one can build himself gently and politely through ethics. Digital ethics must be followed by people most of the people from villages to the popular cities use smartphones and other gadgets for their resources. Digital gadgets play a major role in people today. But the one who is well versed in the technology used the ethics in a negative way where people fail to “*Balance Their Innovation* ”and lack personal freedom.

The misleading of ethics leaves people in a dilemma whether to believe and follow technology or not. This overrating of digital leads people to fear cybersecurity stealing data and personal freedom where people lack their true personal freedom. Only through such ways do people start to fear technology and even question technology. This concept was already predicted and set by W.H.Auden In 1939 in his “The Unknown Citizen ”.

Bad Arden projected the view of surveillance of government towards an individual.

*“Was He Free? Was He Happy?”*

*The Question Is Absurd*

Add an upraised and explored satirically about the surveillance of the government and the lack of freedom of a person and his personality. Man cannot attain true personal freedom when digital and technology watch over them always which leads them to lose their own identity and lose oneself and act in front of technology. The greatest example today is in television we watch Big Boss like lots of cameras over there where people try to act and give themselves in a very good way to get a good name and fame in such cases people lose themselves and their own identity and live for others. They also lack their freedom and try to pretend themselves before others. This technological development is useful in one way but it also leads people to become very lazy they stopped to move to library and find Texas and instead They get all the resources with just a single click the greatest drawback is the original textbooks are not valid nowadays because students and other learners easily move for summary on online.

### **Personal Freedom**

People today live only with technology, no matter their ages or background everybody has an essential need to use technology. Technology doesn't know the variations like rich or poor, Educated or uneducated. Technology is the basic tool nowadays where people make their life more easily. Personal freedom does not depend only on the freedom that gives to the nation but one gets the true freedom of their individuality from this technology and digital world. In the modern world technology consistently helps people and also threatens people by spying on their personal and

private life. Here buying doesn't mean you're a cop or a particular person spying on a person instead a group of cyber security a group of persons in a technology access your data through our smartphones and other gadgets. This buying doesn't happen directly instead through the data that we give for opening an app or like giving our data for filling out email ID and other data for various apps. The other way is to spy through details which we give in the shop while we are a customer. In this way, a person truly lacks Personal freedom. Technology must be used only in a positive way where it should be a tool to make people's lives easier and also in a secure way. Because of this many people are suffering, especially women who still get threatened by morphing and through various ways of collecting their pictures and accessing them. Nowadays stealing data and privacy has become a business where cyber security threats continue among people. So people refused to believe in technology and its positive aspects. Where people started to be fear of technology and digital ethics. Technology must be in way of giving hope to people and self-security where they can feel free to access themselves in the internet world, because of some threats people lack their freedom. Through this, we can understand that technology lacks "Humanity" where it is the way that leads to threats and other problems.

### **Digital Ethics in Changing World into the Literature**

Literature is developed and developed vastly along with the technology the yearly literature was stories form it was an *oral form* and later developed the writing form called *manuscript* and *scroll*. The second source would be Archeological sources and monuments. There would be printing machines, reports, and broadcasts. (This is called Digitalization)

*MESOPOTAMIA* was the earliest known writing around 3400 B.C. and later evolved the books like original editions and now the latest trend is eBooks and blogs. Now literature is on the tip of a finger with a single click the greatest advantage of technology in literature is recording capturing and saving the data and information of literature in and digital way where so much of ancient literature work was lost because of the lack of technology But the positive way today is people can take any kind of literature or any kind of material in online. Where the returned records will not be deleted in any way This era is called "The age of gadgets ", and "The age of information ".

### **Digitalized Learning of Literature**

Certain times before teachers used the gurukul method and later they adopted themselves in classrooms, in the same way, the teaching of literature also varies according to the period. The way of teaching differs from ancient times to the modern time. However, the development of teaching and their technical way is in the process of consistently developing. Teachers also adapt themselves accordingly to the time and also technically adapt themselves for the benefit of students. A few years back teachers used Flashcards, indoor games, etc. But now the teaching of literature completely changed digitally.

The development of teaching improved through digital boards, smart, language labs, podcasts, and audio visualization in the classroom. Through these technologies, students can easily be approachable to teachers and also to the environment with full effectiveness. This type of learning gives a better understanding with proper visualization on the internet, which helps for the long-term retainment in mind of the students. This type of learning doesn't have any age difference or any differentiation between teacher and learners. Even in today's world students have become very well with technology and learning They started searching for their own needs and their topics related to their studies for the betterment of understanding. The *Digitalized Learning Of Literature* has played a major role in recent days.

The leanings were on, *Youtube*; a very basic social media platform where people promote learning a language while earning which is essential in recent trends Students and learners extensively

use this as a resourceful application to learn the language and for other educational purposes. Language games like word hunting, flow-free, hike games, and puzzle solving play a good role in the development of students' minds through the way of their interests. By playing, the students or learners are subjected to active participation and can learn new aspects of the educational dais. Educational sites are widely available and everything a person is unaware of can be known with just a tap. A variety of amicable resources are available for every field of education. It is up to the people to make use of these amenities.

### **How to Prevent the Violence in Digital Ethics**

Most social media and technology are not ethical But it should become more ethical. First, the ethics must be in a proper way where a group of members must create the correct ethics for technology because it must care about people, especially women. This violence not only takes place in a direct way but also on the roads like online games, and apps, which makes people addicted and also lose their money and lead to suicide. These are the hidden violence in digital technology also the assessment of cyber security is at a high level today. Our data and security must be kept safely under digital technology, when technology does it work correctly the reason behind this would be *Ethics*. The violence also affects people mentally and physically with laziness where today's students fail to move to the library or other outdoor shops where every material and thing is brought by them online way of mode. The violence of technology leaves people in a motionless way. The students have forgotten to play outdoor games and have friendships with people, instead, they develop a friendship online which is not a trustworthy one

### **Conclusion**

#### *“Digital Ethics For Changing World”*

This is how we balance our innovation and personal freedom. The future will be activated only in a digital way where people completely depend on digital technology, which is the easy mode of getting anything and everything. It has both Boon and Bane where people must be aware of the boon first and ignore the negative side of technology which is in our hands. Learners must be aware of using technology correctly with good methodization. In technology, the original text is not given more importance which is the greatest drawback of learners where they get only a summary. The other latest trend in technology is AI. It has some special talent that replaces human beings and on the other hand, it is easy to learn the original text simply. Again it is a drawback for humans where in the future most of the jobs would be done technically like AI, where humans lack job preference. Where it leads to poverty and job suffering. Technology is a Boon to this world where development helps in all positive aspects which is essential to living in this world. But few among us make the greatest Boon of technology in a negative way which negatively makes the whole technology. The only solution is *Ethics*.

Following correct ethics will lead both technology and the world in a better way without problems, where we gain our freedom through balancing our innovation of technology.
